**Subject:** Bluewater

I am at a loss. How can there be an argument at all as to whether we should be shifting to alternative sources of energy or not? Crude oil is \$100/bbl, coal emissions are polluting our waterways and the government will not take action in the area of conservation. All the while, we bury our heads in the sand as if nothing is wrong. Is wind the best or only answer to future energy needs? Probably not, but it is a step in the right direction. Force DP&L to build the turbines. I'm tired of scare tactics, naysayers, and ignorance preventing America from moving into the future towards a cleaner environment and energy independence.

Michael P McLain

Public Service Commissioner,

As a community leader and outreach director for Clean Air Council for Delaware, I urge you to support the implementation of the Bluewater Wind farms off the Rehoboth Beach shore. Looking at this issue from an economical, environmental and public health stance, we cannot afford anymore delays. This project has already been delayed almost a full year and another bidding process would be incredibly detrimental to all Delawareans.

Bluewater Wind's proposal is the best for stable prices. By implementing a 25 year renewable energy resource in Delaware that uses free energy (wind is free!); Bluewater Wind can guarantee stabilized pricing, which is something other sources cannot offer. Also, since Delaware is such a small state, there is very little opportunity for another type of renewable energy. Unfortunately, it would also be hard to buy renewable energy from another state being that other states, specifically PA, are having problems filling their demands. The PECO wind farms have already reached maximum capacity with their own wind farm and are currently unable to take on any new customers.

The offshore wind farm's environmental and public health impacts are untouchable. Some of the environmental benefits are there are no contributions to global warming, no air pollution, no water pollution, no CO2, no waste, no fuel deliveries, no mining or drilling, no intake or discharge of water for cooling, no land use for generation equipment, no noise pollution and it promotes recreational fishing with artificial reefs created by the foundations. From a public health standpoint, it has been estimated that there would be 8 fewer premature deaths, seven fewer respiratory or cardiovascular hospital admissions and 2,625 fewer asthma attacks (where Delaware has an asthma rate that is nearly twice the national average). Not to mention, Delaware has many cancer clusters and an incredibly high death rate among cancer patients, especially in lower income areas.

In conclusion, we cannot afford to delay the implementation of renewable energy any longer. Please let me know what actions you plan to take

Sincerely,

  
Angela Geiger

Outreach Director Clean Air Council

706 Washington St Apt 3

Wilmington De 19801

Dear Ms. Nickerson,

I am writing to support the Bluewater wind farm proposal. I have been following this issue closely and I do believe that Delmarva is acting against the best interests of the people of Delaware and is determined to block the Bluewater proposal. I have seen wind farms in California and Ireland and I know that they are a safe and environmentally responsible form of power generation. I am appalled at how the state of Delaware avoids environmentally sustainable progress. Many of the fastest growing areas in this country are those that have progressive and responsible environmental programs and policies (Eugene, Oregon for example). I strongly urged that the Bluewater proposal is accepted regardless of Delmarva's attempts to block it.

Thank you.

Katherine A Sheedy  
356 S. College Ave  
Newark DE 19711

Dear Ms. Nickerson,

I strongly support Bluewater Wind's offshore wind farm as the best solution for Delaware's energy needs.

Dear Members of the PSC,

Please join me in supporting the  
Bluewater Wind Proposal to build  
the nation's first offshore wind  
farm in Delaware. It produces  
no pollution and creates no  
harmful emissions.

Sincerely,

Bed 37 Duke Ches Newark, DE 19713

INDIVIDUAL RATEPAYER COMMENT TO THE PUBLIC SERVICE  
COMMISSION OF THE STATE OF DELAWARE:

PSC Docket No. 06-241

Review and Approval of the Request for Proposals for the Construction of New  
Generation Resources under 26 DEL. C. § 1007(d)

Dear Members of the Public Service Commission:

I am a resident and utility ratepayer in Delaware. I understand that the Public Service Commission is re-examining the proposal of Bluewater Wind to build an offshore wind facility in Delaware. This re-examination is not surprising. Efforts to create a clean and renewable energy future would inevitably bring out powerful and well-financed opposition from traditional, dirty energy interests. In this context, I wish to express my strong support for Bluewater Wind's proposal to build an offshore wind facility.

Bluewater Wind's proposal protects the environment. Burning fossil fuels contributes to Delaware's chronic air pollution problems; it exacerbates global warming, a trend that threatens Delaware's historic coastline. The offshore wind proposal will produce NO air, water, or land pollution, and will contribute no greenhouse gas emissions.

Bluewater Wind's proposal is good for the economy. Continuing to depend solely on fossil fuels ensures an ever-escalating cost of energy. Fossil fuel costs increase each year and are predicted to do so indefinitely. We cannot continue to remain dependent on energy that has such cost volatility and that has to be imported into the state.

Delaware is known as the First State because of its historic patriotism. Supporting energy from non-fossil fuels benefits the nation's energy independence, increases Delaware's energy security, promotes economic development and protects the environment.

As a resident of Delaware, I am proud that my state will be the first in the nation to build offshore wind. I urge you to move forward with the approval process for the Bluewater Wind facility.

Sincerely,

*Raymond Figueroa*

Fossil fuel costs increase each year and are predicted to do so indefinitely. We cannot continue to remain dependent on energy that has such cost volatility and that has to be imported into the state.

Delaware is known as the First State because of its historic patriotism. Supporting energy from non-fossil fuels benefits the nation's energy independence, increases Delaware's energy security, promotes economic development and protects the environment.

As a resident of Delaware, I am proud that my state will be the first in the nation to build offshore wind. I urge you to move forward with the approval process for the Bluewater Wind facility.

Sincerely, Tanesha McQueen

INDIVIDUAL RATEPAYER COMMENT TO THE PUBLIC SERVICE  
COMMISSION OF THE STATE OF DELAWARE:

PSC Docket No. 06-241

Review and Approval of the Request for Proposals for the Construction of New  
Generation Resources under 26 DEL. C. § 1007(d)

Dear Members of the Public Service Commission:

I am a resident and utility ratepayer in Delaware. I understand that the Public Service Commission is re-examining the proposal of Bluewater Wind to build an offshore wind facility in Delaware. This re-examination is not surprising. Efforts to create a clean and renewable energy future would inevitably bring out powerful and well-financed opposition from traditional, dirty energy interests. In this context, I wish to express my strong support for Bluewater Wind's proposal to build an offshore wind facility.

Bluewater Wind's proposal protects the environment. Burning fossil fuels contributes to Delaware's chronic air pollution problems; it exacerbates global warming, a trend that threatens Delaware's historic coastline. The offshore wind proposal will produce NO air, water, or land pollution, and will contribute no greenhouse gas emissions.

Bluewater Wind's proposal is good for the economy. Continuing to depend solely on fossil fuels ensures an ever-escalating cost of energy. Fossil fuel costs increase each year and are predicted to do so indefinitely. We cannot continue to remain dependent on energy that has such cost volatility and that has to be imported into the state.

Delaware is known as the First State because of its historic patriotism. Supporting energy from non-fossil fuels benefits the nation's energy independence, increases Delaware's energy security, promotes economic development and protects the environment.

As a resident of Delaware, I am proud that my state will be the first in the nation to build offshore wind. I urge you to move forward with the approval process for the Bluewater Wind facility.

Burning fossil fuels contributes to Delaware's chronic air pollution problems; it exacerbates global warming, a trend that threatens Delaware's historic coastline. The offshore wind proposal will produce NO air, water, or land pollution, and will contribute no greenhouse gas emissions.

Bluewater Wind's proposal is good for the economy. Continuing to depend solely on fossil fuels ensures an ever-escalating cost of energy. Fossil fuel costs increase each year and are predicted to do so indefinitely. We cannot continue to remain dependent on energy that has such cost volatility and that has to be imported into the state.

Delaware is known as the First State because of its historic patriotism. Supporting energy from non-fossil fuels benefits the nation's energy independence, increases Delaware's energy security, promotes economic development and protects the environment.

As a resident of Delaware, I am proud that my state will be the first in the nation to build offshore wind. I urge you to move forward with the approval process for the Bluewater Wind facility.

Sincerely,

Nageshway Rohidas

INDIVIDUAL RATEPAYER COMMENT TO THE PUBLIC SERVICE  
COMMISSION OF THE STATE OF DELAWARE:

PSC Docket No. 06-241

Review and Approval of the Request for Proposals for the Construction of New  
Generation Resources under 26 DEL. C. § 1007(d)

Dear Members of the Public Service Commission:

I am a resident and utility ratepayer in Delaware. I understand that the Public Service Commission is re-examining the proposal of Bluewater Wind to build an offshore wind facility in Delaware. This re-examination is not surprising. Efforts to create a clean and renewable energy future would inevitably bring out powerful and well-financed opposition from traditional, dirty energy interests. In this context, I wish to express my strong support for Bluewater Wind's proposal to build an offshore wind facility.

Bluewater Wind's proposal protects the environment. Burning fossil fuels contributes to Delaware's chronic air pollution problems; it exacerbates global warming, a trend that threatens Delaware's historic coastline. The offshore wind proposal will produce NO air, water, or land pollution, and will contribute no greenhouse gas emissions.
